THE WATER CYCLE

Number the steps in the water cycle in the correct sequence, beginning and ending with evaporation.

- _____ Replenishes (recharges) water in rivers, lakes, streams, and ponds
- _____ Falls to the earth in some form of precipitation (rain, snow)
- _____ Surface water evaporates again
- _____ Seeps into the ground and enters an aquifer
- _____ Condenses in the atmosphere
- _____ Evaporates from surface water, plants, and animals as water vapor

A hand-drawn diagram of the water cycle. It shows a landscape with a river, a lake, and a cloud. The cycle is numbered 1 through 6. 1: Precipitation falls from a cloud onto the land. 2: Water runs off the land into a river. 3: Water evaporates from the river into the atmosphere. 4: Water seeps into the ground and enters an aquifer. 5: Water condenses in the atmosphere to form a cloud. 6: Water evaporates from the land (plants and animals) into the atmosphere. The diagram is numbered 1-24 at the bottom.
